SDET University

Lab 3 – Exceptions & Files

Read a file that checks the criteria for a password

- Read a file that contains multiple sets of passwords (use http://www.theonegenerator.com/ to generate a set of test data).
- Verify that the password contains all of the following criteria:
  1. A number
  2. A letter
  3. Special character (! @ #)
- Create three User Defined Exceptions for the corresponding criteria.
- If the password does not meet the criteria, create and throw the appropriate exception
